

Overview

Thank you for selecting Siremix's EMX product, EMX is software implementation of Siremix's proprietary patented sound technology called Endpoint Mixing. Sound card and Speakers are required to produce sound using the Endpoint Mixing sound reproduction method. Therefore this document is being created to provides customer a Buyer's Guide to different "sound card + speakers" combinations. We had thoroughly tested each and are confident to recommend to you as our "liked" EMX companions.

As a matter of fact, just like every sound system they largely varies by sound quality, power level, size, brand, make and price. Regarding possible environments being used, there are three main types, use on top of a table (commonly together with a computer screen as we are in the digital age), use as a pure sound system, or use alongside a TV, or as the sound system for a home theater. For commercial use such as restaurant, karaoke, cinema, and concert, this document can serve as a reference for audio professionals to adjust to higher power level by themselves, but recommendations of actual speakers are not provided at this time.

Before you place an order, please make sure any suitable existing sound cards and/or speakers are being considered, 5.1 / 7.1 on board sound card is commonly available inside a desktop computer, and pre-exist speakers are good start to try out even the front and back speaker are not same brand and model number, the 3D effect and sound enhancement may still be experienced and obvious, but to get a fresh and assured quality experience please use one of the speaker set recommended in this guide or two stereo speakers of your choice ideally same brand and model number.

This document is a living document please come back and check for updated information, and please feel free to comment the document and we will incorporate them into the document to make it better.

Enjoy great audio!
